

Ticketing logo guidelines

Use this guide to apply the current Voice of Soul Choir ticketing logo consistently across the website, booking communications and concert materials.

CURRENT LOGO / VERSION 4

The musical ribbon emblem

Flowing ribbons suggest voices coming together. The central curve draws on the movement of a treble clef, while the lower convergence subtly recalls a V. These cues stay within the symbol rather than spelling out VOS.

Scope and status

This is the logo selected for current ticketing use. Keep the artwork intact and use the supplied transparent PNG. This guide does not replace the existing choir identity on other properties.

The spacing, size and application rules in this document are recommended working standards for this version.

Color and backgrounds

Keep the plum, mauve and soft pink family consistent. Use a quiet, light background so the musical curve and open spaces remain clear.

Plum

#6A3D7B

RGB 106 61 123

Mauve

#B365A5

RGB 179 101 165

Soft pink

#DFABD1

RGB 223 171 209

These are the target digital palette values. The current generated PNG contains tonal variations; do not recolor it to force exact matches. Use the values above for supporting brand elements and any future vector master.

Preferred background examples

White #FFFFFF

Pale paper #F7F5FA

On a photograph or dark surface, place the full-color logo on a white or pale panel with the required clear space. Do not apply a white tint, dark-mode filter or automatic inversion. No reverse or monochrome version is defined yet.

Spacing size and wordmark

Leave room around the logo and preserve its square image proportions. Scale it uniformly and keep all curves visible.

Recommended clear space

Use x on every side of the supplied square image. Keep text, borders and other graphics outside this zone. The transparent margin inside the file is additional.

Example

At a 64 px image width, x is 16 px. At 76 px, x is 19 px. Increase the gap when the surrounding layout feels crowded.

x = one quarter of image width

Recommended sizes

Website emblem 64 px minimum; 76 px preferred in a desktop header.

Print emblem Start at 20 mm wide and inspect a physical proof.

Very small uses Create a separately approved simplified icon for favicons or placements below 64 px. Do not squeeze this detailed mark down.

Website wordmark arrangement

Set the choir name in Mitr SemiBold. Use a smaller, spaced sans serif descriptor. Keep the name as live text on the web. The example shows a 76 px mark with at least 19 px separation.

Usage and asset handoff

Use the same source artwork across ticketing touchpoints. Consistency in proportion, spacing and color matters more than decorative effects.

Correct use

Use the transparent logo on white or pale paper. Keep its orientation upright and preserve its original proportions. Pair it with the choir name when the audience may not recognize the emblem alone.

For tickets and booking emails, keep the logo separate from QR codes and booking details. Protect the QR code quiet zone independently; the logo must never overlap it.

Avoid these changes

Do not stretch, rotate, crop or rearrange the ribbons. Do not add literal VOS lettering inside the symbol, floating music notes, flames, outlines, drop shadows or new gradients. Do not recolor individual ribbons or use the pink alone as the entire mark.

Avoid busy photographs, low-contrast backgrounds and animation that deforms the artwork. Do not use older concepts interchangeably with the selected version.

Source asset and production notes

File vos-tickets-logo-v4.png

Repository location public/assets/images/

Format Transparent RGBA PNG, 1254 by 1254 pixels

Current web route /tickets/assets/vos-tickets-logo-v4.png

The current asset is raster artwork. For large signage, embroidery, one-color printing or a tightly controlled print palette, commission a clean vector master and approve a proof before production. Do not label a PNG placed inside an SVG as a vector master.

Before publishing

Check the current file, clear space, background contrast and legibility at the final size. For accessible web use, give a linked standalone logo a destination label; use empty image alt text when adjacent live text already names the choir.
